

CT4 Water Resistant Camera

The CT4 Water Resistant Camera has been designed to overcome the problems experienced when using conventional types of camera in the demanding marine environment.

The latest CCD technology enables this very small unit to produce crystal clear pictures of any area, in varying light conditions.

Designed specifically for the marine industry, the body of this camera is built to withstand the hazards of the engine room and the rigours of the elements when used on the open deck. Unaffected by extreme changes in temperature, spray or torrent, the CT4 is ideal for docking guidance and engine room surveillance.

The CT4C colour version is built to the same specification and provides the same crisp picture - but **in colour**.

● Superb Clarity

● Waterproof

● Rugged

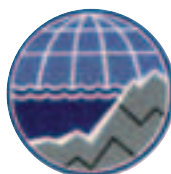

● Compact

● Environmentally Proven

● Monochrome or Colour

● Multi-Purpose

*CT4 Camera
in use by the RNLI
aboard one of their
Severn class
all weather lifeboats.*

**Southampton
Oceanography
Centre**

The CT4 Water Resistant Camera has been tested to depths of over 100m by Southampton Oceanography Centre.
